# SERVICES

LET OUR DEDICATED, RELIABLE TEAM GO TO WORK FOR YOU.

Our dedicated Service teams are strategically located to provide ongoing support to meet the demands of our customers in all global locations. Technicians for Specialist Services RedGuard are available 24/7, 365 days a year. Our staff are fully qualified and certified to the latest global industry standards, and are available for maintaining our assets, as well as client owned assets.

As industry leaders in our field we are fully equipped to deal with all technical requests from our customers, whether it's simple advice regarding certifications, or detailed technical reports and inspections to satisfy operator requirements. Our Service and Maintenance teams are available for call outs upon your request to perform works including but not limited to:

### Installation & Commissioning

Let us develop detailed installation plans to assist with project management and commissioning services. Our experts understand unique challenges and will execute the project safely, on-time, and within budget.

### Maintenance & Repair

With ongoing preventative maintenance and repair, you can reduce equipment downtime even in the harsh operating environments of the oil/gas industry. Schedule ahead, or call us out as needed.

### Emergency Call Out

Global support available 24/7, 365 days a year. Response time is critical in reducing downtime and getting equipment back up and running. Our tech can troubleshoot over the phone or can perform fault diagnoses and repairs onsite.

### Recertification

Some industry codes and regulations require routine testing, inspection, and recertification. We provide these services at our facilities, or on your site. To track and schedule these, we can develop a fleet management solution for your assets.

### Refurbishment

Preventative maintenance is crucial to extend the life of equipment, but sometimes existing buildings and equipment can be refurbished. Our engineering and design team create a detailed plan and these services can be provided at our facilities, or on your project sites.

### Spare Parts

We offer a comprehensive range of spare parts and upgrade package solutions for all our products. These parts are stocked at our global facilities so that we can offer a fast and efficient turnaround.
